

I, Zahara Seybou Harouna, hereby declare that I used artificial intelligence tools to assist me in completing this assignment. The AI was used mainly as a support tool to help me understand and resolve technical issues encountered during data analysis and programming tasks. In particular, it helped me debug and interpret Pandas errors and warnings, including a `TypeError` that occurred when attempting to sort mixed data types (strings and floats) in an age group array during data visualization. It also assisted me in correcting issues in my code logic and improving my understanding of how to handle such data-related problems. In addition, I used AI support to troubleshoot challenges I faced while using Git, especially during committing and pushing my work to a repository. The guidance received helped me identify my mistakes, understand their causes, and apply the correct solutions, which improved both my coding accuracy and workflow efficiency.
